#### EXHIBIT A – SCOPE OF WORK

# Davis Meeker Garry Oak, Level 3 Tree Risk Assessment, Tumwater, WA

The following is the proposed scope and fee for the Davis Meeker Garry Oak, Level 3 Tree Risk Assessment, Tumwater, WA.

#### Scope of Work

- I. **Kickoff Meeting**: Meet with City of Tumwater staff to understand the project background and history.
- II. **Background Review**: Review background materials including but not limited to maintenance history, prior impacts, and past tree risk assessment reports.
- III. **Proposed Approach**: Develop proposed approach for risk assessment for City staff consideration (e.g. sonic tomography, aerial inspection, pneumatic excavation, lab testing, resistance recording drilling, etc.) Technical support will be provided for any permit applications or approvals required and prepared by the City of Tumwater.
- IV. **Prepare for Site Visit**: Receive approval/modification of proposed approach from City staff and prepare for site visit. If work such as sonic tomography or pneumatic excavation will occur, coordinate with subcontractors to schedule work.
- V. Initial Site Visit and Tree Assessment: Visit the site and tree to collect assessment data including but not limited to site information, tree information, tree defects and target information. Aerial inspections will be performed to collect information on subject tree parts that cannot be assessed from the ground. Detailed notes and photos will be taken to record data. The initial site visit will include up to nine sonic tomography readings at selected locations along the trunk and main stems. Hand removal of cobble at the root crown will be completed to visually assess the condition of the root crown. Exact locations of advanced assessments will be recorded with detailed measurements and photos.
- VI. Secondary Site Visit and Tree Assessment (if needed): If after the initial site visit and assessment, a second site visit and assessment is recommended and approved, additional data will be collected which may include additional aerial inspections, up to five additional sonic tomography readings, static pull testing, additional root crown excavation, resistance

drilling, or core sampling. Detailed notes and photos will be taken to record data. Exact locations of advanced assessments will be recorded with detailed measurements and photos.

- VII. **Tree Appraisal (if needed)**: If requested by the City of Tumwater, Todd Prager & Associates will provide the appraised value of the subject tree based on the most appropriate methodology outlined in the *Guide for Plant Appraisal*, 10th Edition. The tree appraisal will be documented in a tree appraisal report.
- VIII. **Data Analysis and Risk Categorization**: Site and tree information collected via background research and during the site visit will be analyzed to determine 1) likelihood of failure, 2) likelihood of impact, 3) likelihood of failure and impact, and 4) consequences of failure for each tree part, condition of concern, and assessed target. This will be used to determine the overall risk rating of the tree from low, moderate, high, to extreme.
- IX. **Mitigation Options**: Based on the risk categorization results and risk ratings for each tree part and target of concern, risk mitigation options will be provided to reduce risk. Risk mitigation options may include but not be limited to cabling, bracing, reduction pruning, periodic future inspection intervals, target protection, target restrictions, and soil, pest, or disease treatments. An overall residual risk rating for the tree will then be provided on a scale of low, moderate, high, to extreme based on the mitigation options. Specifications and cost estimates for mitigation options will be determined in collaboration with other professionals that can complete the work.
- X. Level 3 Advanced Tree Risk Assessment Report: An arborist report will be the final deliverable provided and will include a detailed summary of the project background and history, data collection, tree and site conditions, tree parts and conditions of concern, target information, risk categorization for each tree part and target of concern, risk rating for each tree part and target of concern, mitigation options, residual risk after mitigation is applied, and specifications and cost estimates for each risk mitigation treatment. The report will be organized in a clear and concise format, include photos and maps as supplemental exhibits, and include additional detailed data such as sonic tomography reading results as attachments to the report. Todd Prager & Associates will also meet with City staff to review and discuss the report in detail to answer any questions and review feedback. If required, revisions based on feedback

from City staff will be incorporated into a final draft of the report deliverable.

- The assessment only considers normal weather conditions that might occur during the stated timeframe; it does not consider unusual or extreme weather events that historically do not occur in the area;
- The stated likelihood of failure is not a guarantee of tree stability or instability;
- The timeframe for risk categorization should not be considered a guarantee period for the risk assessment; and,
- The assessment is restricted to the tree(s) specifically addressed in this inspection report and does not include any other nearby trees that may present potential hazards to people or property.
